WORK EXPERIENCE

11 MONTHS

rtCamp

WordPress Engineer

Jan - Sept 2017

- Co-created paid WordPress plugins and sites for purposes ranging from media upload, photo tagging to Image Processing and E-commerce
- Contributed to rtMedia plugin by creating a child plugin for rtMedia that lets the user tag their friends/other users in photos, adding client-specific features such as adding labels to media, comments restriction, customized sorting.
- Created back-end in shell script using ImageMagick CLI that lets the user edit images to be printed on different products, implemented a new category of product and enhanced front-end image editing for a client project Snapbook
- Created a shipping module that gives user shipping method choices based on available shipping resources, enhanced email modules that send emails of type newsletter and order for a client project Rotimatic
- Created a payment gateway plugin that lets the user make payment with Stripe

Foodella

Web Developer

May - June 2016

- Created a referral system which allows the user to earn credits upon referring someone and upon a successful purchase made by the referred person
- Created a subscription module that lets the user purchase monthly, quarterly and annual subscription
- Enhanced an authentication feature to allow the user to authenticate using google and facebook account

AlmaShines

Web Developer

Nov - Dec 2015

- Enhanced a newsletter module using WhatsAPI that lets the user receive messages on their WhatsApp account
- Enhanced an admin module to allow managing universities and student's information based on the geo-locations (cities and states)

PROJECTS

ChessMate

An Online Chess Game

2016

- A realtime online chess game lets you play chess with friends or any member of ChassMate, along with other features such as add friends, chat with opponent during game, offer draw, changing availability status, search players and many more. Implemented using node.js for back-end and HTML, CSS, JavaScript, jQuery for front-end
- Realtime communication modules including matchmaking, moves information, chat, global players list, friends list has been implemented using Socket.IO JavaScript framework which uses websockets
- Email module is responsible for sending registration, password reset emails to users and error emails to admin, which is implemented using nodemailer and zoho mail services

Twitter Timeline Challenge

Website

2016

- A website created as a part of a task provided by rtCamp, which uses twitter api and let user fetch tweets, followers, tweets of followers, search followers, download tweets to different formats and save the file to google drive
- Challenge required a creative solution to overcome twitter api limit for fetching tweets per user and per application
- Implemented using HTML, CSS, JavaScript, PHP and third-party libraries such as TwitterOAuth API, Google(spreadsheet) API, FPDF

Hype

Website

2015

- A dynamic website for movie review system based on upcoming trailers. Modules include Account Creation, Ratings, Reviews, Comments on movie trailers and hence create a 'hype' for the upcoming movies. Implemented using HTML, CSS, JavaScript for front-end and PHP & SQL for back-end

Railway Management

Java Application

2014

- A java application that lists all trains and its details between specified stations and helps you book a ticket for a specific train
